

## Aspects of Water

Inorganic compound H<sub>2</sub>O,  
Comes as ice, rain, and snow.  
No color, odor, or taste,  
Yet vital to all Earth and space.

Sublimation, evaporation, condensation,

You can do it all.

Living in clouds, fog, and vapor,  
Hydrating our planet's every acre.

Melting, transpiration, precipitation,

Your silent work of the day.

Filling lakes, oceans, and seas,  
As Antarctic glaciers and ice caps freeze.

Wondrous solid, liquid, or gas,

Your effortless shifting forms.

Geysers, rainbows, and hot springs,  
Incredible gifts water freely brings!
